My name is Katie Hammer, and I am a recent graduate of North Carolina State University, where I earned my Bachelor of Science in Computer Science in May 2025. I am currently seeking an entry-level opportunity in the tech industry where I can continue learning, contribute meaningfully, and grow my career.

During my time at NC State, I completed coursework and projects across a wide range of computer science topics, including data science, computer vision, software development, and programming in languages such as Java and Python. Through both academic and personal projects, I developed strong analytical thinking, problem-solving skills, and the ability to communicate technical concepts clearly.

As someone early in my career, I see my adaptability as one of my strongest strengths. I am at a highly malleable stage professionally — open to feedback, eager to learn best practices, and quick to absorb new tools and workflows. I bring curiosity, a strong work ethic, and a genuine enthusiasm for learning, along with a fresh perspective that allows me to approach problems without rigid assumptions or preconceived limitations.

I am particularly interested in roles that allow me to combine my technical background with communication, analysis, and broader problem-solving. My interests include artificial intelligence, data science, product management, and technical communication. While I am looking to move slightly away from purely traditional software development roles, I am excited to continue applying my computer science foundation in ways that support data-driven decision-making, product development, and cross-functional collaboration.

As a young woman entering the tech industry, I value clear communication, collaboration, and thoughtful problem-solving. I enjoy working with others, learning from different perspectives, and contributing insights that help teams build better, more intentional solutions.

I am excited about the opportunity to build upon my academic foundation and jumpstart my career in tech, and I am eager to find a role where I can continue learning while showcasing what I have to offer.
